Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a method of correcting illumination nonuniformity across an illumination area, classified in class 356, subclass 124.
 - II. Claims 7-8, drawn to an apparatus for synthesizing arrays of oligomers, classified in class 435, subclass 283.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product. The apparatus of Invention II has numerous applications including synthesizing DNA arrays, performing analyte binding assays and purifying various molecules from a sample without performing the method steps of measuring illumination intensity, evaluating differences in illumination intensity and adjusting illumination intensity as required for the method of Invention I.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II. A search for the method of Invention I would require an extensive search of illumination, illumination measuring and adjusting methods. In contrast a search, for the apparatus of Invention I would require an extensive search of array

synthesis components and their integration e.g. flow cells, light source, optical elements and projection optics.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
